For the first three quarters of 2014, the Group's business performance improved and the profit surged compared to that of the previous year. Benefited from the recovery of the breeding and rearing industry in the PRC, the sales of feeds to external customers has improved since the second quarter of this year. However, since the market price of day-old chicks did not revive to the same level as of the previous year and the growth of the food and beverage market and the consumer market of chicken meat slowed down in Mainland China, the sales of meat product and processed food was affected. The Group continued its improved effort on fixing the contract prices of day-old chicks with reference to market prices pursuant to its strategic guidance on risk elimination and food productisation, and lowered the cost of day-old chicks. Meanwhile, the Group also consolidated and optimised the product lines in respect of slaughtering and food processing in order to reduce the production cost. In addition, the product structure has been improved. During the period under review, the Group's turnover was basically unchanged compared to that of last year, and the accumulated profit increased to RMB9,589,000.

Turnover from feed segment for the first three quarters was basically unchanged as compared to that of last year. However, due to proper control over cost and expenses, the gross profit rose significantly and the gross profit margin continued to improve. Benefited from the revival of hog breeding and rearing industries, the sales of feed segment in Mainland China increased. The improved product structure also led to the increase in gross profit and gross profit margin. Feed segment in Vietnam maintained its growth momentum and the sales volume rose along with the steady development of the local industrial breeding and rearing industry. The segment effectively shifted the burden of the increasing raw materials price and transportation cost and enjoyed higher gross profit and gross profit margin.

The meat products segment was benefited from closer cooperation with contract farmers, and as a result, the sales volume of day-old chicks cultivated with feeds and supplied to contract farmers had a remarkable increase compared to that of last year, and drove the growth of overall operating profit of meat business during the reporting period as compared to the corresponding period of last year. Notwithstanding the positive factor, as the recovery of price of raw meat was lagged behind the market price of chicken, the recovery of gross profit of the meat products segment was below our expectation.

During the period under review, due to temporary decline in demand from major customers in China and Japan, the turnover and gross profit of processed food segment was affected to a certain extent. The sales network in domestic professional catering business developed stably, with continuing focus on influential market; therefore, the revenue arising from the professional catering business increased compared to that of last year. The sales volume of international segment was largely affected by the devaluation of Japanese Yen and the recent outbreak of food safety incidents. The sales volume derived from domestic major customers declined as compared to that of last year due to adjustments on menu of some major western fast food chains and the impact of food safety related incidents. Against this background, in September, the Group held a press release in respect of "Real-name Traceable System" to demonstrate its effort and achievements on food safety over the years and its operational advantage. In addition, gross profit margin increased due to weak raw meat market, effective cost control over the product costs and improved product structure.

The Group maintained a stable amount of assets and liabilities with healthy cash flow. As of 30 September 2014, the net asset of the Group was around RMB1,992,772 thousand, which was substantially the same as that as of 31 December 2013, which was around RMB1,984,295 thousand. As of 30 September 2014, the cash and cash equivalents accounted for 13.6% of total assets of the Group, and both the current ratio and bank gearing ratio were maintained at 159% and 50.3%, respectively.
